About me

I am an engineering student, a certified programming technician, and a software developer with over 2 years of experience who has never stopped training since an early age, to date I have overcome many obstacles and challenges that forged my experience and reflect my dedication.

Education

Universidad Nacional Arturo Jauretche

Informatics Engineering

E.E.S.T. N°7 "José Hernández"

Technical Degree in Programming

EducacionIT

.NET Framework for web development

February 2024 - present

Florencio Varela, Buenos Aires

March 2020 - Dec. 2023

Avellaneda, Buenos Aires

Sept. 2022

Online

Skills

- Programming languages: JavaScript, TypeScript, C#, SQL, SCSS, Go/Golang
- Infrastructure: Proxmox, Docker, Grafana, Jaeger, Kubernetes, Kafka
- Technologies: Git, PostgreSQL, .NET, Linux, Entity Framework, Gorm, Redis, n8n
- Other: English, Domain Driven Design, SOLID, Postman, Clean Architecture, Unit Testing, Scrum,

Experience

Backend Developer

Sept. 2024 - present

- Developed robust and efficient applications using Go along with strong database management.
- Collaborated with a multidisciplinary team using agile methodologies (Scrum).
- Developed automations and agentic workflows using n8n.

Frontend Developer

August 2023 - February 2024

- Built engaging, interactive websites alongside a different team on every project.
- Improved the perceived quality of the company website by 60%, based on an online survey.

Website for a non-profit organization

July 2023 - Dec. 2023

- Designed and developed a dynamic web application for a non-profit organization using Vue, SCSS, MySQL and Go, taking potential accessibility difficulties into account.
- Developed a REST API with Gin and secured it following the highest security standards.

Projects

Deskmatch

- Designed and implemented a microservices architecture with .NET 8, applying Clean Architecture, CQRS and independent databases, guaranteeing serializable transactional consistency and optimizing latency with Redis.
- Developed high-performance SPAs, integrating interactive maps and advanced full-text and geolocation search powered by OpenSearch.
- Automated the software lifecycle and resilience through Docker containers, Kubernetes orchestration, CI/CD pipelines (GitHub Actions), end-to-end observability (OpenTelemetry, Prometheus and Grafana) and robust test coverage with xUnit.

Distributed traffic analytics system

- Developed a distributed real-time traffic analytics system with a microservices architecture using Kafka, Redis and Go.
- Implemented server monitoring using Grafana and Prometheus.
